App-Techs – What We Do

Enhancing situational awareness to improve security outcomes

Design, install, support, maintain XProtect video systems

Specialties

- Education
- Hospitals & Nursing Homes
- Federal & State Agencies
- Municipal Safety & Security
- Property Management
- Manufacturing
- Banking

Build and deliver Pre-configured VMS + Video Analytics Servers

- EasyNVR XProtect Servers
- EasyVA Video Analytics Servers

Hanwha Silver Channel Partner, Dealer

Milestone Premier Partner, Dealer

- 97% Care Plus Renewal Rate

Develop Software + Third-party Integrations for XProtect

- Health Utility Monitor (HUM)
- Bridge-to-XProtect (BTX)
- Smart Client Plug-ins (Spotlight & Latest Alarm)
- DMap (Device Map)

Location: Lancaster, PA, USA
(1 hour west of Philadelphia, PA)

of Employees: 19

Surveillance systems clients in metro Washington, DC, Philadelphia, Baltimore, Pennsylvania, and NJ.

Software clients all over the world!

BTX[®] (Bridge to XProtect)

Middleware that transforms third-party events into XProtect alarms

RECEIVE, TRANSPOSE, FILTER & CLASSIFY events / alarms from third-party systems

Handles many protocols & formats and convert devices alarm messages into XProtect-friendly event/alarm records

ASSOCIATE third-party events / alarms with XProtect devices, user-defined events, & PTZ presets

Link the incoming alarm to one of your XProtect so you can see what is happening when an alarm occurs

CHOOSE which actions are taken by XProtect based on alarm type and source

XProtect offers many features to respond to security events

VIEW and REVIEW third-party events / alarms from the XProtect Smart Client

BTX triggers XProtect features to make alarms viewable to security operators. It also communicates useful information about what happened and where it happened to improve situational awareness.

BTX – How it works

Middleware that transforms third-party events into XProtect alarms

A third-party device detects an event-of-interest.

BTX middle-ware receives and classifies the event data.

XProtect responds to the commands sent by BTX.

The security operator views the third-party alarm from the Smart Client, as it occurs.

Ex. A Hanwha camera detects a person in an unauthorized area.

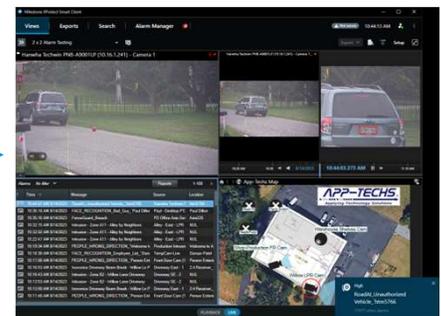

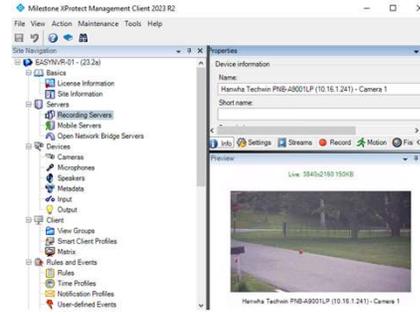

Based on user-defined settings, filters, and schedules, BTX associates the device event to XProtect camera(s) and generates an alarm record.

BTX instructs XProtect to trigger rules, which can initiate pre-defined security responses, (notifications, i/o actions, Smart Wall commands, etc)

Pre-configured notifications, device actions, and view commands are received.

BTX[®] (Bridge to XProtect)

Middleware that transforms third-party events into XProtect alarms

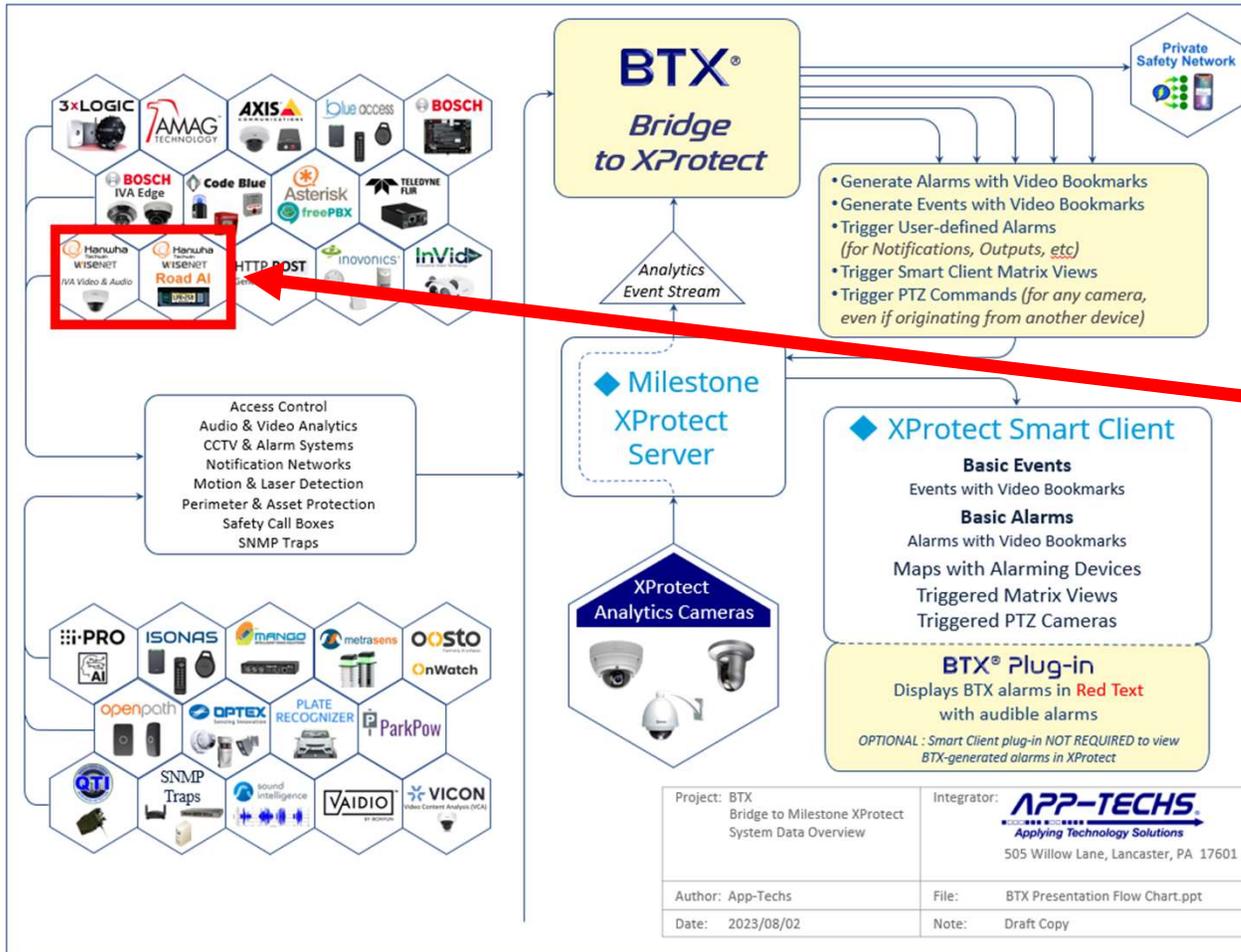

ONE COPY of BTX can simultaneously integrate many products with XProtect

 <i>(Gunshot sensors)</i>	 <i>(Access Control)</i>	 <i>(IP Phones)</i>	 <i>(Edge Analytics)</i>	 <i>(Access Control)</i>	 <i>(Security Panels)</i>	 <i>(Edge Analytics)</i>	 <i>(Emergency Phones)</i>
 <i>(Analytics Encoders)</i>	 <i>(Edge Analytics)</i>	 <i>(LPR Analytics)</i>	 <i>(Webhooks)</i>	 <i>(Wireless sensors)</i>	 <i>(Thermal Cams)</i>	 <i>(Edge Analytics)</i>	 <i>(Access Control)</i>
 <i>(Analytics Encoders)</i>	 <i>(Metal Detectors)</i>	 <i>(Video Analytics)</i>	 <i>(Access Control)</i>	 <i>(Photoelectric Sensors)</i>	 <i>(Parking Mgmt)</i>	 <i>(LPR Analytics)</i>	 <i>(Mass Notification)</i>
 <i>(Ground sensors)</i>	 <i>(Device Events)</i>	 <i>(Audio Analytics)</i>	 <i>(Video Analytics)</i>	 <i>(Edge Analytics)</i>			

Bridge-to-XProtect (BTX) Data Flow

Middleware that transforms third-party events into XProtect alarms

- Versatile third-party integration software for Milestone XProtect
- Integrates video analytics, access control, SNMP traps, sensors, IP Phones, I/O modules and more.
- Unlocks security features of Milestone XProtect for third-party products and software

Hanwha Integration with BTX

Receive real-time Hanwha edge analytics alerts in Milestone XProtect

- Advantages to integrating Hanwha edge analytics with BTX

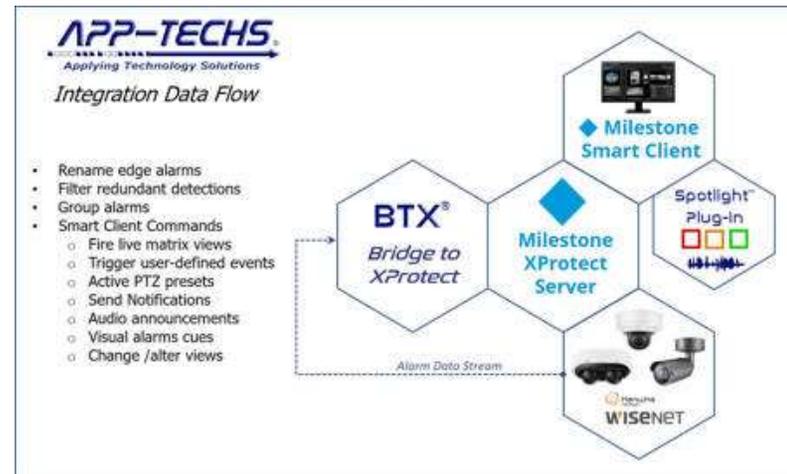

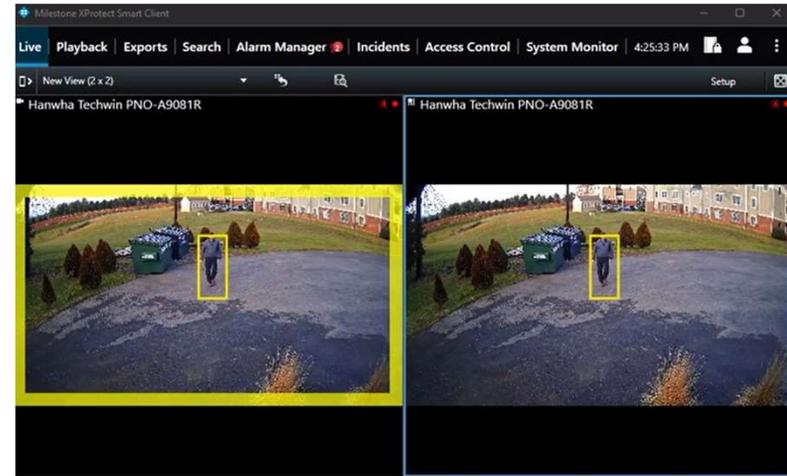

- Receive video analytics alerts as XProtect events / alarms
- NO XProtect “Plug-ins” required
- NO (or very minimal) setup required in XProtect Mgmt Client
- Rename alarms to provide site-specific information
- Create / manage schedule (no alerts from 8am-5pm, etc)
- Bypass limitations of native “driver-based” events in XProtect
 - Management of device “driver” events in XProtect can be time consuming and difficult to configure, troubleshoot, and maintain.

- Trigger XProtect user-defined events

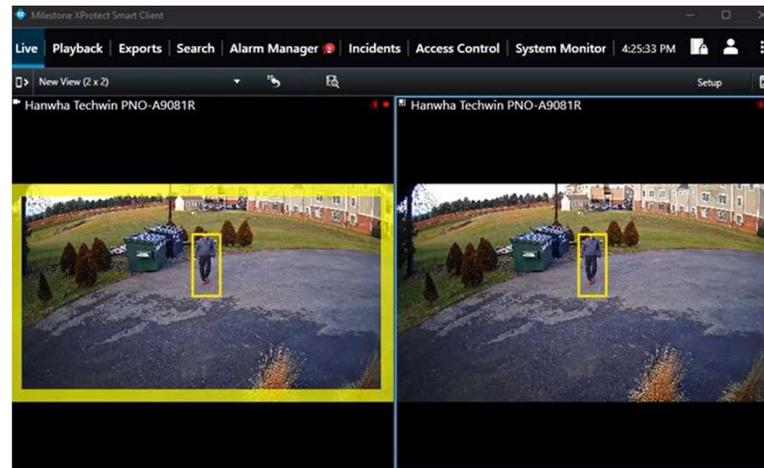

- Make things happen in XProtect with notifications and other security responses

- Use with HANWHA XPROTECT PLUG-IN

- Hanwha’s plug-in is meant for retroactive person / object search
- BTX tells you *NOW*, Hanwha’s plug-in lets you search *LATER*

WISENET Road AI Integration with BTX

REAL-TIME ALERTS WHEN A LICENSE-PLATE-OF-INTEREST IS DETECTED

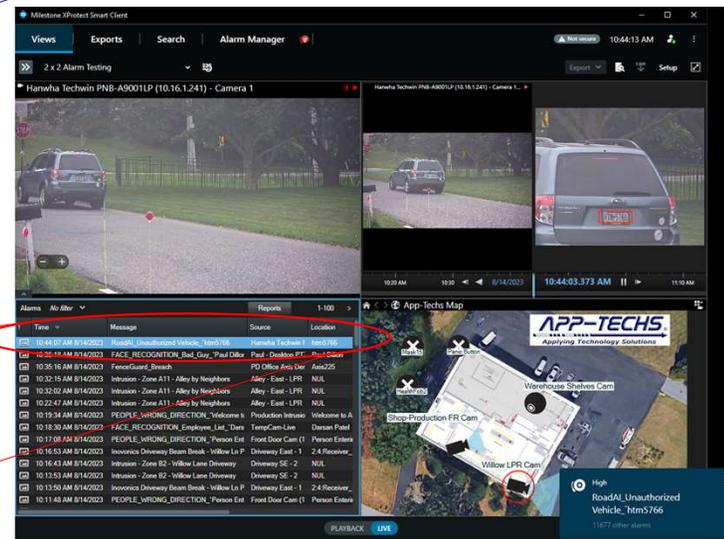

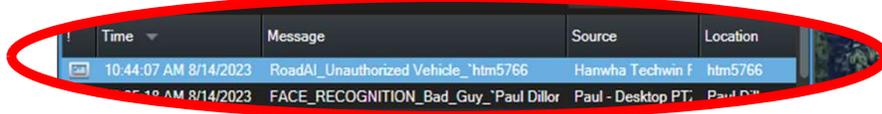

4. If a license plate matches a plate on your list(s) ...

5. BTX associates LPR detections with XProtect cameras

6. BTX generates an XProtect alarm record with video bookmark AND triggers rules and other security actions appropriate for a given list.

- (Open the gate for employee plates, email security if an unauthorized plate is detected, etc)

WISENET Road AI Integration with BTX

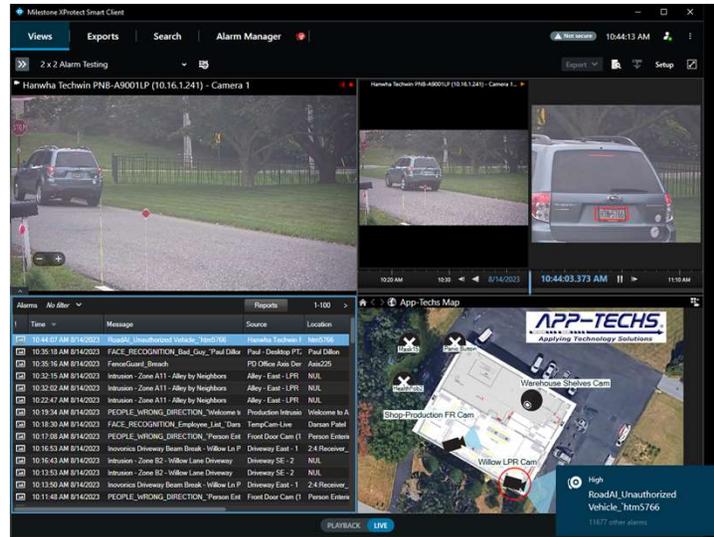

REAL-TIME ALERTS WHEN A LICENSE-PLATE-OF-INTEREST IS DETECTED

The screenshot displays the Milestone XProtect Smart Client interface. At the top, there are tabs for Views, Exports, Search, and Alarm Manager. The main area is divided into several sections:

- Live Camera View:** The top-left pane shows a live feed from 'Hanwha Techwin PNB-A9001LP (10.16.1.241) - Camera 1'. A red arrow points to this view with the text 'Display live camera view'.
- Alarm Playback:** The top-right pane shows a playback window for the same camera. A red arrow points to a snapshot of a vehicle with a license plate 'DMC-9123' with the text 'Alarm playback to review previous Road AI detections'.
- Alarm Record:** The bottom-left pane shows a table of alarm records. A red arrow points to a record for 'RoadAI_Unauthorized Vehicle_ htm5766' with the text 'Alarm record with video bookmark (indicates Plate # and list name)'. The table includes columns for Time, Message, Source, and Location.
- Map:** The bottom-right pane shows an 'App-Techs Map' with various camera locations marked. A red arrow points to a 'Willow LPR Cam' icon with the text 'Map icons indicate alarm location'.
- Toast Notification:** A notification box in the bottom-right corner displays 'High RoadAI_Unauthorized Vehicle_ htm5766' and '11677 other alarms'. A red arrow points to this notification with the text 'Toast notifications presented in real-time'.

BTX Pricing

Simple, Straightforward, Scalable

BTX BASE SOFTWARE LICENSE \$1500

ONE-TIME BASE LICENSE COST, NON-RECURRING.

NO PER-DEVICE PRICING

One instance of BTX can manage an unlimited amount of Milestone & third-party devices

NO SUBSCRIPTION-BASED PRICING

LICENSES ARE PURCHASED PER MAC ADDRESS
Multiple BTX instances running on different servers requires separate licensing

SOFTWARE UPGRADE PROTECTION (SUP) \$300 (1yr)

KEEP YOUR SOFTWARE CURRENT

OPTIONAL, RECOMMENDED

Ensures compatibility with the latest releases of Milestone XProtect and Microsoft Windows

INCLUDES GENERAL SOFTWARE TECHNICAL SUPPORT

SUP customers receive free support to maintain software

DISCOUNT PRICES AVAILABLE FOR 2-5 YR PURCHASE

Extend SUP coverage, no yearly billing

BTX SOFTWARE UTILITIES INCLUDED

BTX PURCHASES INCLUDE SOFTWARE UTILITIES

AMAG Polling App

Bridge to Inovonics App

Code Blue HTTP Listener

Mango Listener

Ironyun Smart Client Plugin

Active Guardian Listener

MXTEST

BTX Service

HTTP Listener Service

BTX[®]

Make the XProtect Smart Client *POP*

The **SPOTLIGHT** Plug-in by App-Techs TELLS you what is happening and SHOWS you where attention is required.

The **LATEST ALARM** Plug-in automatically displays an analytics detection snapshot and repeats a "before-and-after" video loop of the event

- AUDIO ANNOUNCEMENTS**

User-defined, alarm-specific audio messages are announced directly from the Smart Client workstation speakers - based on alarm keyword matches

"Hanwha edge camera detects a person by the northwest gate entrance"

- COLOR-CODED BOUNDING BOXES**

Visual alarm cues indicate the nature and/or severity of an event or alarm.

- *POP-UP* WINDOWS and VIEW CHANGES**

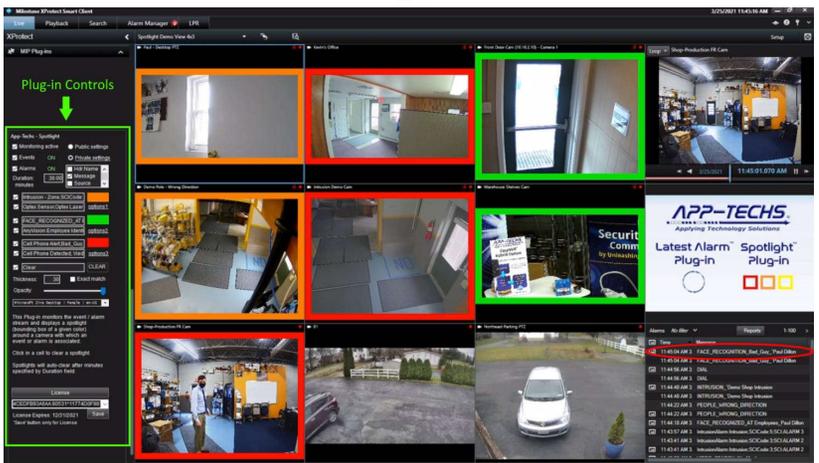

Alert an operator to an alarm by changing what is being viewed on-screen.

- DISPLAY ANALYTICS DETECTION SNAPSHOTS**

See what analytics detected automatically and hands-free

- BEFORE-AND-AFTER VIDEO LOOPS**

View what led to an event being triggered and what transpired after the event occurred, automatically and hands-free

BTX[®] (Bridge to XProtect)

Delivering security solutions by simplifying third-party integrations

Summary

1. Receive **REAL-TIME** Wisenet Road AI license plate detection alerts with BTX.
2. Simplify management of Hanwha edge analytics in XProtect with BTX.
3. App-Techs develops solutions to deliver **SITUATIONAL AWARENESS** to XProtect security operators.
